...Wintry Weather possible near the Virginia border tonight...

Valid ending at Saturday March 5th, 2016 at 7 PM EST
Created Thursday March 3rd, 2016 at 4:00 PM EST

- **Rain will mix with, or briefly change to snow and sleet, when precipitation rates are heaviest tonight, mainly between 10pm and 4am. This may result in a very light accumulation of snow and sleet on grassy and elevated surfaces across the northern NC Piedmont, mainly from Roxboro to Henderson to Warrenton.**
- **Temperatures initially around 40 degrees when the precipitation begins to reach the ground this evening will fall to between 32 and 35 degrees overnight, coldest (at freezing) when precipitation rates are highest.**
- **A Winter Weather Advisory is not anticipated at this time due to limited accumulations. However, a heavier band of snow could produce up to one inch of snow. Please check back this evening for the last forecast updates.**
