KEY TAKEAWAYS

Valid Friday, September 02, 2016

Tropical Storm Hermine Impacts

	FRI	FRI PM	SAT - SUN	MON
THE REPORT OF THE PARTY AND PARTY.	Rain increases through the day. Winds begin increase in SE NC around noon. Brief tornadoes possible during later afternoon and evening.	Heavy rain increases in coverage and intensity across eastern and central NC. Localized flash flooding and brief tornadoes possible overnight.	Conditions will improve from southwest to northeast as Tropical Storm Hermine moves northeastward off Mid-Atlantic coast. Lingering flooding of poor drainage areas.	No issues associated with Tropical Storm Hermine.

- 1) Greatest impacts to NC expected Friday PM through Saturday AM.
- 2) Heavy rain (4-7") + wind (30-40 mph, gusts of 55 mph) expected Friday evening through Saturday morning across eastern NC.
- 3) Localized flooding and flash flooding will be primary threat.
- 4) Conditions will begin to improve by mid-day Saturday with lingering showers.
- 5) Flood threat will subside early next week.
